The Center for the Economics of Human Development is a multidisciplinary enterprise at The University of Chicago dedicated to understanding the economics, biology, and psychology that together create flourishing lives. The Center hosts lectures featuring research from a wide array of disciplines, which are of interest to university members as well as the general public.

As part of our Biology and Behavior Forum, CEHD is pleased to host a lecture on “Sociogenomics & the Dynamic Genome: a new perspective on nature and nurture,” by Gene E. Robinson, one of the world’s leading scholars on genetics and epigenetics. Robinson is the Director of the Carl R. Woese Institute for Genomic Biology at the University of Illinois, Urbana-Champaign.

He has done fundamental work on animal genomics of relevance to many varied populations of living beings.

Background reading and the abstract for this lecture can be found on the CEHD website below:
